The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include: (1) Statements of Water Diversion and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

(3) assists the State to determine if additional water is available for future appropriators. (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (1) provides a record of water use. The filing of a statement (1) provides a record of water use and per 1914 appropriative water users. The filing of a statement (1) provides a record of water use.

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State.

Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert water which originates in a different watershed, or return flows from use of groundwater. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert water which originates in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users.

There are two principal types of surface water rights in California. They are riparian and appropriative rights.
